

WHY CHOOSE CTS PACIFIC?

✓ Certified Technicians

FOA and ETA International certified telecommunications installers ensuring strict standard compliance.

✓ Turnkey Execution

From underground civil excavating to final network splicing and certification.

✓ Pacific Region Expertise

Specialized deployment tailored to local Guam and Pacific infrastructure environments.

✓ Advanced Equipment

Precision fusion splicers, OTDR testers, and micro-trenching technology for seamless execution.

TELECOMMUNICATIONS INSTALLER & INFRASTRUCTURE SERVICES

- Fiber Optics Cable Installation
- Data Cabling & Network Racks
- CCTV Security Cameras
- Access Control Systems
- Micro Trenching Technology
- Excavating & Underground Works

*Certified Professionals • High Precision •
Turnkey Solutions*

FIBER OPTICS & DATA CABLING

▪ Fiber Optics Cable Installation

Full-spectrum fiber deployment including single-mode and multi-mode installations. Expertise in precision fusion splicing, OTDR link testing, termination, and patch panel integration.

▪ Data Cabling Solutions

Structured copper cabling (Cat6, Cat6A) for high-speed corporate networks. Complete rack setup, cable tray routing, labeling, and channel certification testing.

▪ Telecom Installer Capabilities

Our experienced installers manage voice/data distribution, main distribution frame (MDF) builds, intermediate distribution frame (IDF) rollouts, and riser connectivity.

CCTV & ACCESS CONTROL

▪ CCTV Surveillance Systems

Comprehensive physical security solutions featuring IP high-definition cameras, NVR integration, night-vision optics, and remote viewing network configuration.

▪ Access Control Systems

Advanced access management including card key readers, biometric scanners, electronic door strikes, automated gate integration, and centralized control panels.

▪ System Integration & Maintenance

Seamless unification of security cameras, access points, and structured data cabling into a single, cohesive network environment with ongoing maintenance support.

MICRO TRENCHING & EXCAVATING

▪ Micro Trenching Technology

Clean, fast, and narrow trenching designed for rapid fiber optic deployment in asphalt and concrete pathways with minimal traffic disruption and fast backfilling.

▪ Civil Excavating & Trenching

Heavy equipment excavation for underground conduit, utility vaults, handholes, and main telecom duct banks, supporting large-scale infrastructure growth.

▪ Turnkey Field Execution

From ground-breaking civil trenching to cable blowing, pulling, splicing, and final network commissioning — handled end-to-end by our certified team.
